SEPTEMBER
ANNOUNCEMENTS

THE HOME OF HEATHER

KNIGHT & STRUCK COMPANY

ONE MADISON AVENUE

NEW YORK

Now Ready for Distribution

The first Gardening Book

designed for

the benefit of the American gardening public Exclusively.

Entitled :

GROWING BULBS

by

MAURICE FULD

Eighty pages, bound in heavy cover for library use.

\$1.00 per copy postpaid.

Make your New Lawn in September.

You can expect a weedless lawn if you sow seeds between the first and last of September.

It is perfectly reasonable that this should be so for whatever weedseeds are deposited in your soil will not germinate in the fall; the grass seed alone will come up and if a thick stand is established this fall (a feature which "Heatherhome Lawn Grass" alone will accomplish) you can be positive that weeds have not a ghost of a chance to ever come through.

Although

"Heatherhome Lawn Grass"

has only made its debut this spring it has built for itself a country-wide reputation due to its merits alone.

We offer

"Heatherhome Lawn Grass"

suitable for all general lawns except where sunlight cannot penetrate,

Weighing thirty pounds per bushel.

One quart 50c Peck \$3.00 Bushel \$10.00

The "Under Trees" Lawn Grass.

Blended to produce grass in positions where there is an excess of shade produced by trees or buildings.

Weighs thirty pounds per bushel.

One quart 75c Peck \$3.50 Bushel \$12.00

PERENNIALS FOR FALL PLANTING

To the real lover of flowers the care and requirements of each individual specie of plants comes always instinctively, for he reasons with the plant. He knows full well that when he transplants a primrose in springtime he disturbs it at the most active time of life, and in consequence the plant receives a setback from which it recovers slowly, perhaps never. Notwithstanding the fact that all perennials can be planted in the springtime, and are so recommended, there are some of them which would succeed much better if planted in the fall; for instance, some of the earliest-flowering kinds, such as *Arabis*, *Alyssum Saxatile Compactum*, *Columbine*, *Phlox Subulata*, *Iceland Poppies* and *Oriental Poppies*, if planted in the spring invariably lose thereby a full season's bloom; others, again, like, *Lily of the Valley*, *Dielytra*, etc., etc., can only be planted in the fall; and so, for this season, we offer here a full list of such perennials, which should be planted in the fall. As descriptions of all are given so fully in our Spring Book, we give here only a summary of names and prices.

THE TIME OF PLANTING.—Perennials as enumerated below should be in the ground *before October 15th*, for they must make another new set of roots and establish themselves thoroughly before winter sets in.

For descriptions refer to our Spring Book, pages 121 to 160. If the recipient of this pamphlet is not the fortunate owner of our original Spring Book, kindly notify us and we shall promptly mail a free copy.

The True Scotch Heather.

(CALLUNA VULGARIS)

It is exceedingly gratifying to us to have the privilege to announce that we offer now, for the first time, young, sturdy little plants of the true real Scotch Heather.

For several years we have experimented with this plant to ascertain if it is hardy in every climate in America, and our trials have proven that it is absolutely hardy in every state of the Union, from Maine to California.

It grows very rapidly, and produces its wealth of deep pink blossoms during the late summer and fall. In front of shrubbery, as a beauty spot in the lawn, in the foreground of borders, in the rockery—in fact, in every nook of the garden, it fits and will prosper.

Every one loves the Scotch Heather, and why not have it in your own garden? Allow 18 inches of space.

We are the leading growers of all kinds of heather in America, and extend a cordial invitation to every one to visit “The Home of Heather,” our plant-growing establishment at Flushing, New York, at all seasons of the year.

Young sturdy plants.....Each, \$.25; per dozen, \$2.50; per 100, \$18.00

Young Seedling Plants

of

Hardy Perennials and Biennials

It is far more interesting to raise a plant from its earliest infancy than to procure it in well-matured condition, and in order to give our friends the opportunity of enjoying the rearing of such youthful specimens, we offer below an extensive list of such varieties as we can supply in sturdy little plants and which thus can be procured at most reasonable figures. To be successful with them, the following rules must be carefully observed:

PLANT BEFORE SEPTEMBER 25TH.—As these young plants must be thoroughly established before even frost sets in, puddle the plants when set in the ground and shade them from the glaring sun for the first few days after transplanting; when the ground is frozen (not before), cover the beds with either dry leaves, straw or salt hay, but at no time use hot, fresh or moist manure; some varieties should be wintered by planting them in a cold-frame, and such sorts are prefixed.*

In ordering, please state that you wish seedling plants. All of the following we offer at the uniform price of

75c per dozen \$5.00 per 100 \$45.00 per 1000

Not less than six of any one sort will be furnished.

NEW GERMAN IRIS

	Each	Doz.
King of Iris. The upper petals of clear lemon color, while the lower petals are very large, of a deep satiny brown, with a broad border of golden yellow.....	\$.50	\$5.00
Lohengrin. Of a deep violet mauve.....	.50	5.00
Niebelungen. Olive green, suffused with yellow; falls deep purple, suffused with creamy white on the edges50	5.00
Mithras. Standards pale yellow, falls violet shaded with claret and yellow border.....	.50	5.00
Princess Victoria Louisa. Standards pure sulphur yellow, falls rich plum color, with cream-colored edges50	5.00
Rhein Nixe. Standards pure white, falls deep violet blue, with white margin; grows three feet high50	5.00

JAPANESE IRIS

On account of the unusually difficult Japanese names, we have substituted numbers for names.

- No. 1—Pure white.
- No. 2—Rich royal purple with white veinings.
- No. 3—Crimson purple, yellow centre.
- No. 4—Rich royal purple with many white veins.
- No. 5—Silvery white with a broad border of lilac veined with white.
- No. 6—Violet with white veins, yellow centre.
- No. 7—White with canary-yellow centre.
- No. 8—Bright purple with crimson sheen.
- No. 9—Rich velvety purple shading to deep purple; golden yellow centre.
- No. 10—Pure light violet with golden centre.
- No. 11—Creamy white, delicately veined with violet.
- No. 12—Aniline blue, veined white and white halo.
- No. 13—Late flowering, white.
- No. 14—Ground-color white, beautifully traced and marbled with ultramarine blue.
- No. 15—Bright violet purple, shaded blue.
- No. 16—White, densely spotted violet blue.
- No. 17—White, densely veined with rich violet purple.
- No. 18—Rich velvety pansy violet.
- No. 19—A splendid pure white.
- No. 20—White ground, densely spotted with bright violet purple.

All of the foregoing have been selected for their elegant markings and shadings, and their size; they all have six-flower petals.....Each, \$.35; doz., \$3.50; per 100, \$25.00

Double Chinese Paeonies.

STRONG ROOTS which will give IMMEDIATE EFFECT.

September and October are the two ideal months for planting this "Queen of June," and such roots as we furnish should give an abundance of flowers this coming spring.

Paeonies love a sunny situation, a good rich but well-drained soil and ample space to grow in; when planting, dig a good-sized hole, put a good layer of well-decayed stable manure in the bottom, cover it with at least six inches of pure soil and place the roots so that the crown of it is about three inches below the regular surface of the garden; allow three feet of space for each clump. We do not believe in offering to our patrons roots which require growing three years before the first flower shows, and we rejoice in being able to offer stock such as cannot be duplicated in this country.

ESTABLISHED CLUMPS of DOUBLE CHINESE PAEONIES.

	5-10 Shoots Each	10-15 Shoots Each	15-25 Shoots Each
SEABREEZE, Blush Pink, very fine.....	\$2.00	\$2.50	\$4.00
